

The European Union's aggregated catches and quota consumption of TAC and Quota stocks 2023

Explanation of the data

The list below contains the European Union's aggregated catches of TAC and quota stocks in the year 2023. The catches of child stocks (Special condition=true) are represented separately, but also included in the total catches of the parent stock.

The catches are expressed in tons with a precision of 3 decimals.

The initial quota is the quota defined in the Fishing Opportunities Regulation, and the adapted quota is the final EU quota at the end of the year 2023, after swaps, transfers and deductions have been applied. The uptake (%) is calculated from the adapted quota. Column Fishing Stop contains the date when a fishing stop was declared on the stock. If the column has no value, no fishing stop has been declared.

Stock Group	Stock species name	Stock area description	Stock code	Special Condition	Parent stock code	EU Initial quota	EU Adapted Quota	Catches	Special Condition Catches	Total Catches	Unit	Uptake (%)	Fishing Stop date
