Develops a platform integrating economic, social and environmental aspects related to Adriatic fisheries

A science-based tool for supporting sustainable management of marine resources and for improving communication, participation, capacities useful to fisheries management

Transforming fisheries in the Balearics

*Marilles Foundation in collaboration with
Low Impact Fishers of Europe*

A conversation about driving change towards sustainable fisheries in Mallorca, Menorca, Ibiza and Formentera.

- Fisheries management and co-managment plans
- Incorporating sustainability into labelling schemes
- MPAs to secure a future for the fishing fleet
- Ending illegal activity
- Low-impact gear

Diverse fishing sector
Strong decline but
stabilising recently
35 trawlers
230 small-scale boats

3000 TM landings / year
Catch value 20mill Euro/yr

Ocean Reef-Tower Oases™ (ORTO)

Mission

The mission of Sea Harmony's team is to restore the environmental welfare and abundance in the coastal water of the Sea and Oceans, by boosting offshore shellfish production industry.

Vision

Sea Harmony's vision is to be an innovative technological company working for the nature-human synergy approach, crucial for the growing need of sustainable food production for the increasing population and consumption.

We live in times when 67% of all wild animals on the planet are lost (1970-2020) due to human activity. Sea Harmony believes that it can take part in the solution to preserve the life on the planet. Our innovative approach derives from our vision that only the industry and generating of business profit could mobilize the necessary resources to reach the needed scale and impact to solve the global environmental and food security problems.
