Ostréicole Ría
d'Etel

3 phases spread over a period of 1 year:

Phase 1: Definition of the energy needs of all oyster farms and the solar, wind and tidal potential available around the farms.

Phase 2: Realization of a renewable energy production demonstrator from tidal and solar resources at the CBS site.

Phase 3: Manufacture of an oyster barge with electric propulsion recharged by renewable energies for validation by the oyster farmers of the estuary.
