

COOPERATION IDEA

Fisheries Local Action Groups

Clam farming: a new horizon for aquaculture

The Sotavento do Algarve FLAG is looking for cases, solutions and actions taken by local companies to **breed a specific clam species: the *Ruditapes decussatus***. We want to share our experience and to cooperate with other FLAGs on how to further understand the captive breeding of this clam seed and thus try to overcome its current shortage.

Objectives:

- **Learning** from other areas and fisheries communities on initiatives related to the breeding of *Ruditapes decussatus*.
- **Sharing best practices** related to the above learning, assessing outcomes and developing together solutions for the successful breeding of *Ruditapes decussatus*.
- **Transferring good practices** to this type of clam's growers.

Proposed actions: making contact with other FLAGs and undertaking a comparative case study analysis and exchange of ideas; sharing best practices.

Desired results: the production of a good practice guide on breeding the *Ruditapes decussatus* clam.

Thematic category: aquaculture, bussines support, processing

Looking for partner located in:
