# Using transport sensor data

- Area: transportation of goods along the roads, using trucks
- smart sensors inside trucks.
  - tracking (routes), driving behaviour, fuel consumption, pollution
- Potential use by NSI:
  - goods transport on roads (quality evaluation and -improvement of current survey-based statistics)
  - truck density maps?
- LIMCO: large research projects (Institute of transport economics in cooperation with industrial partners)
  - Aim: transport planning and optimisation, sustainable business models

# Subtask 4.2 Truck transport

- Landscape of
  - sensor- and other transport data (auxilliary data or variables of interest)
  - stakeholders
- Foundation for future use of these data at NSIs
