

WP5 Mobile phone data

Workpackage 5 (WP5) of [ESSnet Big Data](#) focuses on **mobile phone data** and has two main objectives:

- **investigate and enable access** to mobile phone data, a potential source for official statistics which is highly promising but at the same time challenging from a technological, institutional and legal (privacy) point of view;
- conduct **pilot studies** demonstrating use cases for producing or enriching official statistics.

WP5 was carried out by representatives of five [ESSnet Big Data partners](#) in the first project stage (SGA-1): INE (Statistics Spain), which is leading WP5, and INSEE (Statistics France), ISTAT (Statistics Italy), Statistics Finland and Statistics Romania; Statistics Belgium was also involved as an additional consulting partner. In the second stage (SGA-2), their total number increased to nine by Statistics Belgium now taking a full part and by the addition of three more partners: Destatis (Statistics Germany), ONS (Statistics UK) and CBS (Statistics Netherlands).

More background information on WP5 can be found [here](#).
