

This page provides an overview of **experimental statistics** developed in the context of [ESSnet Big Data workpackage C on enterprise characteristics](#). Experimental statistics are tentative and provisional because they do not yet comply with all usual methodological standards and because they often are restricted to one or a few Member States, rendering it as yet impracticable to compile results at EU level.

IMPORTANT: please note that these results should NOT be considered official statistics, but merely showcase examples of statistical outputs based on big data.

See [here](#) for an overview of experimental big data statistics from the other ESSnet Big data workpackages as well as experimental statistics hosted by other statistical institutes.

Austria
