

CONCLUSIONS OF THE E-CONSULTATION: SA of PT19 products

This e-consultation was started because Spanish Competent Authority had doubts about the environmental classification of a co-formulant included of the product.

Recently, we had received an application for a simplified authorisation procedure of PT19 biocidal product, in which composition there are substances of annex I of BPR and co-formulant. Therefore, as we had concerns about classification on environmental hazards, we had doubts about whether or not to follow a simplified procedure.

After the received answers from MSs and discussion can be summarised as follows:

→ FROM THE ENVIRONMENTAL POINT OF VIEW

It agreed there is not enough ecotoxicological information to classify this substance with an environmental hazard. In consequence, from an environmental point of view, a simplified procedure may be applied to grant the authorisation.
